Subject: Laboratory reports and data packages

Lew,

Thank you again for the opportunity to participate in work group discussions regarding ethylene oxide sampling.

Please see attached the complete laboratory data validation packages for samples that we collected between 8 and 9 February collocated with sampling at the USEPA stations Village Hall and USEPA Warehouse.

For that date we used 2 separate samples collected over the day and night. This was a matter of logistics regarding the availability of 12-hr vs 24-hr flow controllers for that date. On subsequent sampling dates, we had 24-hr flow controllers available and collected one sample for 24 hours.

Also see attached the final reports for samples collected for the 24-hr periods from Feb 11-12 and for Feb 14-15. We expect to have full data validation packages within a few days and will share these also when available.

Finally, attached is a summary table in which the sample IDs are decoded and matched to the sampling stations to show the findings for the corresponding dates.

We look forward to receiving similar information from the other participants in the workgroup.

Thanks,
Bob DeMott
